From: Stephen Michael Kellat <skellat@fastmail.net> To: submit@bugs.debian.org Subject: RFP: koha -- Koha Integrated Library System Date: Sat, 02 Mar 2013 19:59:22 -0500
--

Package: wnpp

Severity: wishlist

* Package name : koha
Version : 3.10.3
Upstream Author : Robin Sheat <robin@catalyst.net.nz>
* URL : <https://github.com/Koha-Community>
* License : GPL v2
Programming Lang: Perl
Description : Koha Intergrated Library System

At this point, the upstream author listed is their packager instead. The folks behind Koha produce an Integrated Library System within a FLOSS context that is used by multiple libraries. They are currently producing their own package archive but this should be normalized and brought within Debian's own archive to improve access to it.

More information about the software and the community that has grown up around it can be found at <http://www.koha-community.org>
