In first picture here shows that four mail should not be read.

In the second picture here shows that two e-mail should not be read. These I have opened but there are still two unopened in the side window. But in the main window displays all messages as read/

I hope this gives you any better explanation of the events here.

UBUNTU is commander's program, and I say after having used Windows since version 3.11

I am a professional user of applications, and I'm very satisfied as a user.

I only lack to get started in the last 2 applications that I use and which are developed on Windows platform, so I am totally independent of Windows and Office.

With Windows, I've probably spent over 20 years .....

Thanks for now 1.5 years of trouble-free UBUNTU if I compare to the other platform

Best regards from,

Fred Edstrom, Norway
