Binary package hint: pdfedit

I open Firefox with any webpage and I print in PDF file with CUPS/PDF. I open pdfedit and I load this document. I select the page number (on the left down corner) and when I try delete it, pdfedit crashes.

This is the output:

```
$ pdfedit
pdfedit: ccontentstream.cc:814: void pdfobjects:
:CContentStream::deleteOperator(iterator::SharedDoubleLi
nkedListIterator<pdfobjects::PdfOperator>, bool):
Afirmación '!operators.empty()' fallida.
Cancelado (core dumped)
```
