The s390-tools package

The s390-tools package contains the source tree of a set of user space utilities that should to be used together with the z Systems (s390) Linux kernel and device drivers. Currently the source code is hosted on the IBM Developer Works web page ([IBM_DEVWORKS]): <http://www.ibm.com/developerworks/linux/linux390/s390-tools.html>

Overview

Standard install dependencies

In s390-tools bash and perl scripts the following “standard” tools are used and therefore the packages are install dependencies for the s390-tools package:

Package	Tools
coreutils	basename cat date df dirname echo expr mkdir rm sleep sort tail tr uniq wc
gawk	awk
grep	grep
procps_ng (RHEL7) / procps (SLES12)	ps sysctl
sed	sed
util-linux	getopt kill
systemd (RHEL7) / udev (SLES12)	udevadm udevsettle
perl (RHEL7) / perl-base (SLES12)	perl
bash	bash

Library dependencies

The following libraries are required for building s390-tools:

- glibc
- glibc-static:
 - zfcpdump_part.rd
- libstdc++:
 - vmur
 - vmconvert
- fuse:
 - cmsfs-fuse
 - hmcdrvfs
 - zdfsfs
 - zgetdump
- ncurses:
 - hyptop
- netsmp:
 - osasnmpd

The following table shows all tools that have a build dependency:

Tool	glibc	glibc-static	stdc++	fuse	ncurses	netsmp	libpfm
/sbin/zgetdump	x			x			
/usr/bin/cmsfs-fuse	x			x			
/usr/bin/hmcdrvfs	x			x

SUSE

For SLES the s390-tools package is named “s390-tools”. SUSE has one big monolithic s390-tools package and two subpackages “osasnmpd” and “s390-tools-zdfs” (since SLES12). Currently SLES12 contains the following s390-tools packages:

Default install:

- s390-tools-1.24.1-38.17.s390x

Optional install:

- s390-tools-zdfs-1.24.1-38.17.s390x
- osasnmpd-1.24.1-38.17.s390x

Red Hat

For RHEL the s390-tools package is named “s390utils”. For RHEL5 one monolithic s390utils package has been used. With RHEL6.0 we introduced subpackages. For RHEL6 libzfcphbaapi was part of s390utils. This has been moved to a separate package for RHEL7.

Currently RHEL7.1 contains the following s390-tools packages:

Default install:

- s390utils-1.23.0-17.el7.s390x (meta package)
 - s390utils-base-1.23.0-17.el7.s390x
 - s390utils-cmsfs-1.23.0-17.el7.s390x (non IBM addon)
 - s390utils-cpuplugd-1.23.0-17.el7.s390x
 - s390utils-iucvterm-1.23.0-17.el7.s390x
 - s390utils-mon_statd-1.23.0-17.el7.s390x
 - s390utils-osasnmpd-1.23.0-17.el7.s390x
 - s390utils-ziomon-1.23.0-17.el7.s390x

Optional install:

- s390utils-cmsfs-fuse-1.23.0-17.el7.s390x
- s390utils-devel-1.23.0-17.el7.s390x
- s390utils-zdfs-1.23.0-17.el7.s390x

Debian

Debian has one monolithic package called s390-tools: <https://packages.debian.org/sid/s390-tools>
