

Getdeb Packages Uninstall

The following document will help you to uninstall all getdeb packages, this action is recommended if you are about to perform an Ubuntu distribution release upgrade.

System -> Administration -> Synaptic Package Manager

Click on the "Search" button

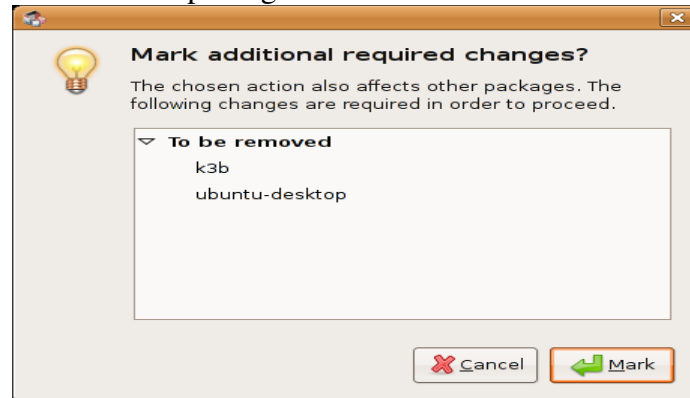

Type "getdeb" on the search field, and change the "Look in" to version.

From the result list select all packages by pressing “CTRL-A”

Then mark the packages to be deleted with “DEL”

You may get a warning that additional packages will need to be removed:

Please note that “ubuntu-desktop” means you are removing some packages which are part of the Ubuntu standard desktop list, it will not remove all your desktop packages.

You should now use the “Apply” button to start the packages removal.
